- **Continence Improvement**
- **Cardiopulmonary**
- **Post-Covid Care**
- **Pain Management**
- **Memory Loss and Cognition**
- **Communication Sustainability**

Broad River Clinical Support Programs and Resources for Our Team

The following clinical programs and resources are immediately available to our staff and will help our therapists get up-to-speed quickly and be supported the whole way through their employment with us.

CF AND STUDENT MENTORSHIP PROGRAM

To introduce new graduates into the rehab profession in post-acute care, Broad River has implemented a comprehensive mentorship program designed to **bridge the gap between school and career**, and to help ease the transition from school to real-world practice.

FOCUS PROGRAM SERIES

To provide support and training to our therapy teams, we have **22 Focus Quality Care programs** to meet the needs of all patient populations.

REGULATORY AND DOCUMENTATION TRAINING

There are aspects of working in a SNF that students and new professionals are left to “figure out” during a clinical practicum or early in their career. Therapists are left to make sense of the ever-changing regulatory environment, without having the benefit of working in that environment or having access to current and relevant information. Through the development of our **Student Mentorship Program and CF-SLP Clinical Fellow Training Series**, we walk recent graduates and therapists who are new to skilled nursing through key concepts, including:

- Understanding payer sources
- Choosing ICD-10 codes that support the course of care
- Documenting in a way that supports medical necessity
- Billing for services appropriately
- And Reimbursement – The Business of working in Skilled Nursing.

DOCAUDIT™ (Documentation Auditor)

Broad River's revolutionary DocAudit tool helps our internal teams with accuracy of their documentation. DocAudit is used by our therapists for documentation accuracy and focused clinical education.
